

EVERY WOMAN
SHOULD HAVE
A MAMMOGRAM

- All women should have a baseline screening mammogram between the ages of 35 and 40 (recommended by The American Cancer Society)
- Beginning at age 40, all women should have an annual screening mammogram (recommended by The American Cancer Society)
- All women with certain risk factors should discuss an appropriate screening program with their physician

THE MOST ADVANCED
STATE OF THE ART
TECHNOLOGY FOR
BREAST CANCER DETECTION

A new ally in the fight...

Taking the Fight to a Whole New Level

DIGITAL MAMMOGRAPHY SYSTEM

DIGITAL MAMMOGRAPHY

Town East Diagnostic Therapy Center is excited to offer its patients the most advanced, state of the art technology for breast cancer detection, Selenia™ Digital Mammography. Through the use of filmless, selenium detector screens, Selenia™ captures the sharpest images for improved visibility of the breast.

From the patient's perspective, digital mammography offers a number of practical advantages such as shorter exam times and an elimination of retakes due to unreadable film images.

THE VERY BEST IN MODERN TECHNOLOGY

- Allows for early diagnosis, thus providing patients with an increased chance of survival and leading longer, productive lives
- Provides the sharpest images for improved visibility of the breast (from the skin line to the chest wall) for more accurate results
- Radiologist can view the x-ray image more closely, zeroing in on suspicious or concerning areas
- Accommodates almost all breast sizes with a single exposure; it is the only system available with this feature
- Shorter exam times and no waiting for film to be developed (less than half the time of traditional film-based exams)
- Images can be produced and retrieved faster, thus allowing the technologist to review the images while the patient is in the examination room
- Helps reduce call-backs for additional images
